DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, corresponding to claims 1-8, drawn to a power saving switch and method comprising a sensor, an input part, and a control means to selectively power a device and turn off the sensor based on signals from the sensor and input part.

Group II, corresponding to claims 9-10, drawn to a power saving switch comprising a sensor and control means to selectively power a device and turn off the sensor based on signals from the sensor, wherein the control means converts the sensor into a turn-off sensor and a turn-on sensor after the occurrence of specific events.

Group III, corresponding to claims 11-20, drawn to a power saving switch and method comprising two sensors and control means to selectively power a device and turn on/off the sensor based on the sequential order of signals from both sensors.

2. The inventions listed as Groups I, II and III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Group I recites an input part for receiving a manual turning-on signal or turning-off signal of an electric device. This limitation is not found in either Groups II or III.

Group I also recites the limitation that the control means stops operation of the sensor for a predetermined time when the manual turning-on signal is inputted into the input part. The ability to turn off the sensor is not recited in either Groups II or III.

Group II recites that the controls means changes the function of the sensor, between a turn-off sensor and a turn-on sensor, depending on what state the sensor was just in when it was tripped. This limitation is not found in either Groups I or III.

Group III recites that there are two sensors, and that the control means activates the electric device based on the order in which the sensors are tripped. The second sensor and the sequential triggering detection are not found in either Groups I or II.

3. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to ADI AMRANY whose telephone number is (571)272-0415. The examiner can normally be reached on Mon-Thurs, from 10am-4pm.
